

IN THE CLAIMS

What is claimed is:

1. A system for multivariable comparison of financial information, comprising:
 - 5 a client interface to a user inputting weightable search information; and
 - a search interface, communicating with the client interface, the search interface operative to interrogate at least one network-enabled information source according to the weightable search information to generate search results.
- 10 2. The system of claim 1, wherein the client interface comprises a communications link for transmitting the weightable search information to a transaction server and transmitting the search results to the user.
3. The system of claim 2, wherein the client interface comprises a graphical user interface for displaying at least one of the weightable search
15 information, the search results, and graphical coding objects associated with the search results.
4. The system of claim 1, wherein the client interface comprises a network-enabled connection to a client workstation.
5. The system of claim 4, wherein the network-enabled connection
20 comprises an Internet connection.
6. The system of claim 1, wherein the weightable search information comprises multivariable financial information.

7. The system of claim 6, wherein the weightable search information comprises weighting information to be applied to the multivariable financial information to generate a composite results score.

8. The system of claim 7, wherein the weightable search information is modifiable to be applied to the search results.

9. The system of claim 1, wherein the search interface comprises a connection to a relational database.

10. The system of claim 1, wherein the client interface comprises at least one of keyboard input, voice input, touch pad input, voice output, pointing device input, speech input, biometric input, and graphical output at the client workstation.

11. A method for multivariable comparison of financial information, comprising:

a) receiving weightable search information from a client interface;
and

b) interrogating at least one network-enabled information source according to the weightable search information to generate search results.

12. The method of claim 11, wherein the client interface comprises a communications link for transmitting the weightable search information to a transaction server and transmitting the search results to the user.

13. The method of claim 12, wherein the client interface comprises a graphical user interface, further comprising a step of c) displaying at least one
